

# BUILT TO FIT.

- *ADVANCED BRAKING SYSTEMS*
- *BEST-IN-CLASS FRICTION & ROTORS*
- *STEERING & SUSPENSION CONTENT*

## POSI QUIET™ – PREMIUM DISC BRAKE PADS

Posi Quiet brake pads are manufactured using the same positive molding process as Original Equipment suppliers, ensuring precise fit, consistent stopping power and long life. All Posi Quiet brake pad friction formulations are asbestos-free and available in three application-specific compounds.

**Posi  
Quiet**

## SEMI-METALLIC BRAKE PADS

Our 104 Series brake pads are 100% scorched for easy bed-in, and 100% shimmed to eliminate noise and vibration. Copper-free friction formulas provide high initial bite.

## CERAMIC BRAKE PADS

Our 105 Series features the longest wearing, most advanced material available for increased rotor life.

## EXTENDED WEAR BRAKE PADS

Excellent for heavy duty applications, our 106 Series extended-wear brake pads deliver stable friction performance in high-temperature, heavy-duty and fleet applications.

## BUILT FOR SILENT STOPPING. BUILT TO LAST.

Combine the most advanced materials, OE-precision fitment and application-specific design – that's Posi Quiet brake pads. Our premium brake pad line marries Centric Parts' legendary first-to-market brake friction research and development, in-house testing and cutting-edge fabrication processes. It's a combination that makes Posi Quiet brake pads built to fit, built for silent stopping and built to last.

### PREMIUM DISC BRAKE PADS

Posi Quiet brake pads are engineered to provide maximum performance, extended service life and eliminate noise and dust. Our in-house friction materials lab enables our engineers to analyze rapidly and precisely, prototype and test the most advanced brake friction products.

### APPLICATION-SPECIFIC HARDWARE

Stainless abutment clips and retaining clips supplied, when you need them, to finish the job.

### POSITIVE MOLDING PROCESS

Identical process used by OE suppliers, utilizing extreme pressure for consistent material density throughout the pad.

### PRECISION CUT OR SHAVED BACKING PLATES

Precision-manufactured to ensure proper fit, even pad wear and consistent braking throughout the life of the brake pad.

### MECHANICALLY ATTACHED, APPLICATION SPECIFIC SHIMS

Tailored for superior noise abatement compared to lesser adhesive or drift-lock style shims.

### SCORCHING

Raises initial cold effectiveness, stabilizes friction levels without break-in and provides consistent performance across the entire operating range.

***YOUR NEXT MOVE?*** Getting access to Posi Quiet brake pads is simple.
